EDUCATION

Purdue University, Mitch Daniels School of Business
B.S. in Business Analytics & Information Management

West Lafayette, IN

B.S. in Supply Chain, Information & Analytics

Dec 2026

PROJECTS

Supplier Scoring & Performance Reporting Tool / *Python, Statistical Modeling, Process Improvement, Cross-Functional Reporting*

- Built a reusable quantitative scoring framework in Python to give stakeholders ongoing visibility into a Fortune 500 supplier's delivery performance, consistency, and spend — directly supporting sourcing decisions and process improvement initiatives
- Partnered with a cross-functional team to gather, clean, and reconcile supplier data, benchmarking performance metrics to surface inconsistencies and recommend corrective action
- Applied weighted scoring and statistical normalization to rank supplier performance objectively, translating analysis into actionable bid and procurement recommendations
- Earned 2nd place at Purdue's Quantitative Methods (QM) Showcase, presenting methodology and findings to cross-functional stakeholders and leadership

Inflation Analysis Reporting Dashboard (CPI Data) / *Python, Tableau, Time Series Analysis, Data Visualization, KPI Reporting*

- Developed an interactive Tableau dashboard as a reusable reporting tool, tracking long-term inflation trends from Bureau of Labor Statistics CPI data (1913–2017) to support data-driven decision-making
- Processed and cleaned decades of time-series data to enable accurate trend visualization and cross-period comparison
- Identified 3 major inflation spikes and long-term economic cycles, translating complex data into actionable insights and visual storytelling for stakeholders

University Retention Risk Segmentation / *Python, Data Cleaning, K-means Clustering, Segmentation Analysis*

- Analyzed 6,500+ student records to identify retention risk using K-means clustering across academic, financial, and engagement features — supporting a targeted intervention program
- Determined an optimal 3-cluster solution using the Elbow Method and Silhouette Scores
- Identified financial stress (past-due balance) as the primary driver of non-enrollment; recommended a targeted outreach strategy to improve program effectiveness for high-risk segments

Customer Purchase Prediction & Spending Analysis / *Python, Linear & Logistic Regression, Feature Engineering, EDA*

- Built linear and logistic regression models on 38K+ transactions to predict customer spending and purchase likelihood, achieving R^2 of 0.85 and AUC-ROC of 0.88
- Engineered time-lagged features and applied transformations to reduce data skew, improving model performance by 7%
- Identified transaction frequency as the strongest spending driver through correlation analysis; optimized decision threshold to improve F1-score by 15%, reducing wasted marketing spend by \$10K annually

EXPERIENCE

Student Supervisor | Cosi, Purdue Honors, West Lafayette, IN Jan 2023 – Dec 2023

- Coordinated daily operational timelines and delegated tasks across team members based on workload and individual strengths, supporting efficient team coordination — mirroring the stakeholder and deliverable coordination central to program execution
- Maintained adherence to operational procedures and standards, reflecting the process discipline and independent work skills required in supply chain and program environments

TECHNICAL SKILLS

Languages: Python, SQL, R, Java, C

Analytics & BI: Tableau, Excel, EDA, Statistical Analysis, Dashboarding, KPI Reporting

Modeling: Classification, Regression, K-means Clustering, Feature Engineering, Statistical Scoring Models

Professional: Analytical Thinking, Program & Project Coordination, Process Improvement, Cross-Functional Communication, Benchmarking, Problem Solving, Independent Work

CERTIFICATIONS

Tableau Business Intelligence Analyst | Citi Quantitative Analysis (MQA) | UC Davis SQL for Data Science | Building AI Agents and Agentic Workflows | IBM Python for DS, AI & Development | DataCamp: Introduction to AI Agents
